DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 35-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Petell et al. (USPN 6,302,570).

Regarding claim 35, Petell et al. discloses a frame (150B), a light emitting diode (390, 391) housed within the frame, a first light guide (341) positioned to be illuminated by the light emitting diode, wherein the first light guide provides directional side lighting in a first direction, and a second light guide positioned to be illuminated by the light emitting diode, wherein the second light guide provides directional side lighting in a second direction (light guide bundle 340 & 341 carries more than one light guide per bundle).

Regarding claim 36, Petell et al. discloses the frame is formed with holes and the each light guide protrudes through at least one of the holes (372, 373).

Regarding claim 37, the light emitting diode is a first light emitting diode, the sign (Figure 1A) further comprises a second light emitting diode housed within the frame, wherein the first and second light guides are positioned to be illuminated by the second light emitting diode.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 38 is rejected under 35 U.S.C. 103(a) as being unpatentable over Petell et al. (USPN 6,302,570).

Regarding claim 38, Petell et al. disclose the claimed invention, except for the different color that is provided to the different light guides. It would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize different color LED(s) to provide different colored light output to each light guides, since applicant has not disclosed that utilizing different colored LED(s) to output different color solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with LED(s) of Petell et al.

Allowable Subject Matter

5. The following is a statement of reasons for the indication of allowable subject matter: the claims recite a light emitting diode that emits a radiation pattern, a number

of light guides positioned to be illuminated by the light emitting diode, wherein each light guide is positioned such that a cross-sectional center of each light guide substantially corresponds to location of the maximum luminous intensity of the radiation pattern of the light emitting diode. Yoneda (USPN 6,595,674) discloses a light emitting diodes & optical fiber(s) wherein each light guide positioned at offset locations relative to the center axis of the light emitting diode. Because none of the references disclosed the detailed structure of the each light guide is positioned such that a cross-sectional center of each light guide corresponds to location of the maximum luminous intensity of the radiation pattern of the LED, nor is there any motivation to combine them, the claims are deemed patentable over the prior art of record. Claims 1-26, 28-33 are allowed.

Response to Amendment

6. Examiner acknowledges that the applicant has canceled claims 27 & 34 and amended claims 1, 2, 9, 10, 14, 15, 16, 17, 18, 19, 24, 25, 26, 30, 31 & 33.
